# AHMED CHAKCHA

ahmad.chakcha@gmail.com +216 92 712 737 Sfax, Tunisia github.com/Chaksterr ahmed-chakcha chaksterr.me

## Professional Profile

AI and Data Engineering student with experience in LLM agents, RAG, NLP, MLOps, Spark, and Kubernetes. I build data pipelines, APIs , and deployable AI solutions, from raw data to production. I am looking for a final-year internship in AI, Data Engineering, and DevOps.

## Education

**Data Engineering Cycle** – *Faculty of Sciences, University of Sfax* Sep 2024 – Jun 2027

**Integrated Preparatory Cycle in Computer Science** – *Faculty of Sciences of Sfax* Sep 2022 – Jun 2024

## Professional Experience

**AI & Full-Stack Engineering Intern** | *KPIT, Sfax* Jul 2026 – Aug 2026

- Built an AI recruitment platform (FastAPI, PostgreSQL, React, TypeScript) with Google Workspace OAuth2 integrations.
- Implemented a switchable LLM layer (Ollama/cloud) powering ATS scoring, CV parsing, and a RAG assistant.

**DevOps & Platform Engineering Intern** | *Data Eng. & Semantics Research Unit, Sfax* Jul 2026 – Aug 2026

- Built a FastAPI/PostgreSQL backend with a Streamlit dashboard running Ansible playbooks with live logs.
- Automated a 3-node Kubernetes cluster (kubeadm, Calico) on CloudStack, with Longhorn for persistent storage.
- Deployed GitLab, ArgoCD, SonarQube, and Prometheus/Grafana from the dashboard.

**AI Engineering Intern** | *Digital Research Center of Sfax* Jul 2025 – Aug 2025

- Built CareTalk, a French medical chatbot for breast cancer, pneumonia, and heart failure, with a 2,500+ pair/disease dataset.
- Fine-tuned three GPT-2 French models (124M) to a best perplexity of 3.26 and deployed with Streamlit.

## Technical Skills

- **Programming Languages:** Python, Java, C/C++, TypeScript
- **AI, Machine Learning & LLMs:** LangChain, LangGraph, RAG, Fine-tuning, NLP, Computer Vision, Hugging Face, TensorFlow
- **MLOps & Model Deployment:** MLflow, Metaflow, DVC, Prefect, BentoML, Evidently AI, Great Expectations
- **Data Engineering & Visualization:** Hadoop, YARN, Spark, Hive, Iceberg, Trino, dbt, dlt, Airflow, Talend, PostgreSQL, MongoDB, Neo4j, MinIO, Power BI, Tableau, Superset, Plotly, Streamlit
- **Cloud, DevOps & Observability:** Docker, Kubernetes, Ansible, GitLab CI/CD, GitHub Actions, ArgoCD, Microsoft Azure, GCP, CloudStack, OPNsense, HAProxy, Traefik, Prometheus, Grafana

## Projects

**MLOps Pipeline Architecture** | *Prefect, DVC, MLflow, BentoML, Evidently*

- Built an MLOps pipeline forecasting French electricity demand (XGBoost, Prophet, Holt-Winters) with Prefect, DVC/MinIO, and MLflow, and served the best model via BentoML with Evidently drift detection and Streamlit.

**Agentic Web Scraper** | *LangGraph, Stagehand, Microsoft Foundry*

- Built an autonomous scraper combining Stagehand agents and a custom LangGraph agent.
- Cut extraction costs with cached LLM-generated CSS schemas and a hybrid Foundry/NVIDIA setup.

**UniLM – AI Campus Learning Platform** | *Tech Resolve Challenge 3.0 – 2nd Place*

- Built a multilingual RAG platform (Qdrant, Gemini, FastAPI) with auto-generated quizzes, flashcards, Tunisian-dialect audio, and a professor dashboard.

**ChurnHouse – Telecom Churn Data Platform** | *dlt, dbt, Iceberg, Trino, Airflow*

- Built a data platform for a telecom company that identifies which customers are likely to churn and why, by merging CRM, support, and billing data in a bronze/silver/gold lakehouse (MinIO, Iceberg, Trino).
- Ingested raw data with dlt, cleaned, masked, and tested it with dbt (invalid rows isolated), and produced a customer_360 table with risk scores and reasons shown in Superset, all executed with Airflow.

## Certifications

Agentic AI (Databricks) • Kubernetes for Beginners (KodeKloud) • Intermediate Python and SQL (DataCamp) • Microsoft Office Specialist

## Volunteering Work

Competitive Programming Club FSS (General Secretary, Treasury Assistant) • GDG on Campus FSS (Member)

## Languages

Arabic (Native) • English (Proficient) • French (Fluent)
